Dear Sir,

From the magazine of ASA I learned about your biopharmaceutically oriented intern program. I am very interested in this position. I believed that my education and background are appropriate for this program.

You indicate that the program involves statistical and related data review and data transformation programming. As a master student majored in statistics of UCSD, I got a solid theoretical background of statistics, so I could learn new methods in the program as soon as possible. Works at Graduate Mathematics Consulting Group UCSD and Board Trac, a action sport marketing and research company provides me some experiences of real data analysis. And I got SAS BASE programmer certification, the course training and work experience also enhanced my programming ability, and I am confident that I can handle basic programming problem effectively and learn quickly. I like biostatistics and wish to be a qualified biostatistician in the future through my hard work.

I have attached my resume for your review. I would appreciate the opportunity to discuss a position with you, and will contact you in a week or ten days to answer any questions you may have and to see if you need any other information from me. Thank you for your consideration.

Sincerely,

Dong Nie
